

In-kernel dispatcher function

`rex_dispatcher_func:`

```
// save the callee-saved registers
pushq ...
// save the stack and frame pointer
movq %rsp, PER_CPU_VAR(rex_old_sp) ...
// switch stack
movq PER_CPU_VAR(rex_stack), %rsp ...
// invoke the REX program
call *%rdx
```

`rex_exit:`

```
// restore old stack and frame pointer
movq PER_CPU_VAR(rex_old_sp), %rsp
// restore the callee-saved registers
popq ...
ret
```

REX program

`rex_prog1:`

```
...
ret
```

Panic

In-kernel landingpad

`rex_landingpad:`

```
// report error
// set default return value
...
jmp rex_exit
```
